

Success Stories 2024

dpsuisse – Abacus Integration

Seraina Dietschi
dpsuisse

Our association approached Chili Digital AG with a large and complex project idea. Despite certain difficulties due to its complexity, the project was perfectly implemented. Roger and his team worked closely with us and were always there for us. They were able to fulfill all of our wishes. The trusting and solution-oriented collaboration is commendable. We greatly appreciate this and recommend the company.

Implementation

HubSpot as the central platform for member management and automation.

Integration

Seamless connection between HubSpot and Abacus – via ChiliDataHub.

Individual Software

Custom API connector for complex billing directly in the HubSpot front end.

Challenges

Membership fees should be calculated automatically and correctly, despite complex models and special cases. In addition, smooth and accurate transfer of billing data to the Abacus ERP system was required.

Solution

A custom API connection in the HubSpot front end and ChiliDataHub ensure automated processes and a seamless connection to Abacus. The user-friendly interface makes everyday work noticeably easier.
